

Common M level can reinforce or offset relative separation

Frozen POST readout | log M coordinates | signed target – fixed-wrong content gap

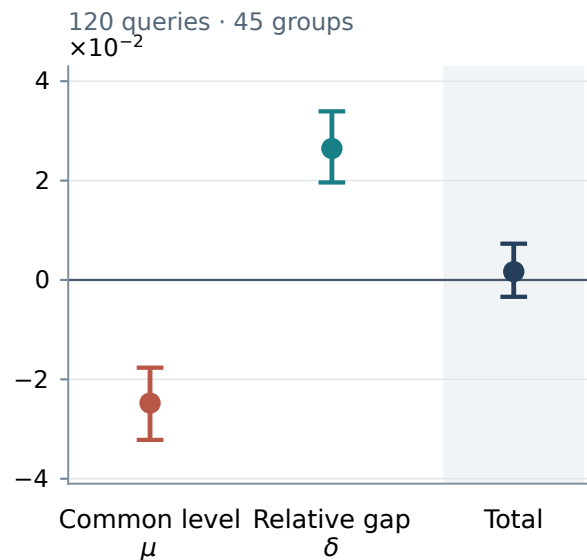

**(a) LOCAL → GLOBAL phase
native amplitude**

**(b) Add distribution input P
with joint input J**

**(c) Add joint input J
without distribution input P**

Points: group means. Whiskers: exploratory 95% group-bootstrap intervals. Each panel has its own y-scale.

Shown: symmetric contributions of μ and δ ; their sum equals total. Four phase directions are averaged within groups.

Post-hoc, coordinate-dependent mechanism diagnosis; not unique causal attribution. Panels overlap and are not pooled.
